

Sustainable Adaptation of EU Farming Systems to Climate Change

Jordi Domingo, Daniel Hernández (Fundación Global Nature)

Climate Change – Consequences on European Agriculture

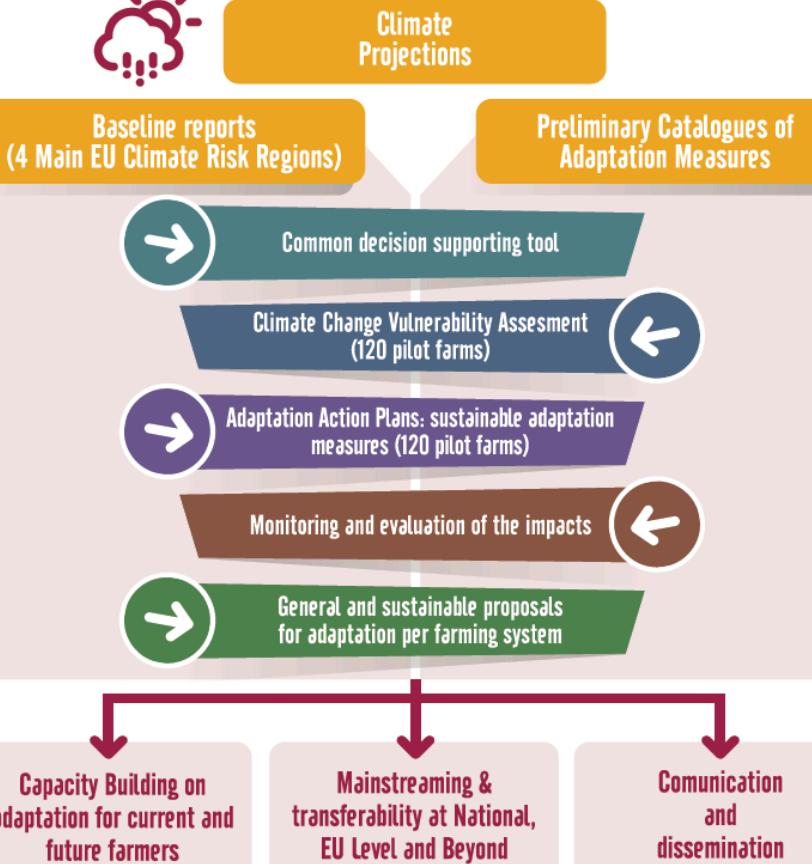

**4 PROJECT PARTNERS
IN 4 EU CLIMATE RISK AREAS**

**40 MONTHS
09/2016 – 12/ 2019**

**OVERALL BUDGET
2.150.000 EURO**

LIFE AgriAdapt

INVOLVING FARMERS IN THE FOUR MAIN EU CLIMATE RISK REGIONS

IN PRACTICE

4 BASELINE REPORTS WITH AGRO CLIMATE GRIDS PER CLIMATE ZONE

COMPILE OF SUSTAINABLE ADAPTATION MEASURES

ONE DECISION SUPPORTING TOOL FOR THE FARM VULNERABILITY ASSESSMENT

120 PILOT FARMS WITH DOMINANT AND MINOR FARMING PRACTICES.

Agro Climate Zone Tool:

Climate

- Recent Past (30 years) observations
- Climate projections near future (about 2030)

Sum of precipitation (mm)

YEAR	TOTAL	Winter	Spring	Summer	Fall
1987	507	127	170	122	88
1988	826	255	397	110	64
1989	526	177	145	127	77

Agro Climate Zone Tool:

Climate

- Recent Past (30 years) observations
- Climate projections near future (about 2030)

Crop

- Crop yield compilation (15 years)
- Average yield and variations

IAC

- Automatic calculation of 60 Agro Climatic Indicators
- For Recent Past & Near Future

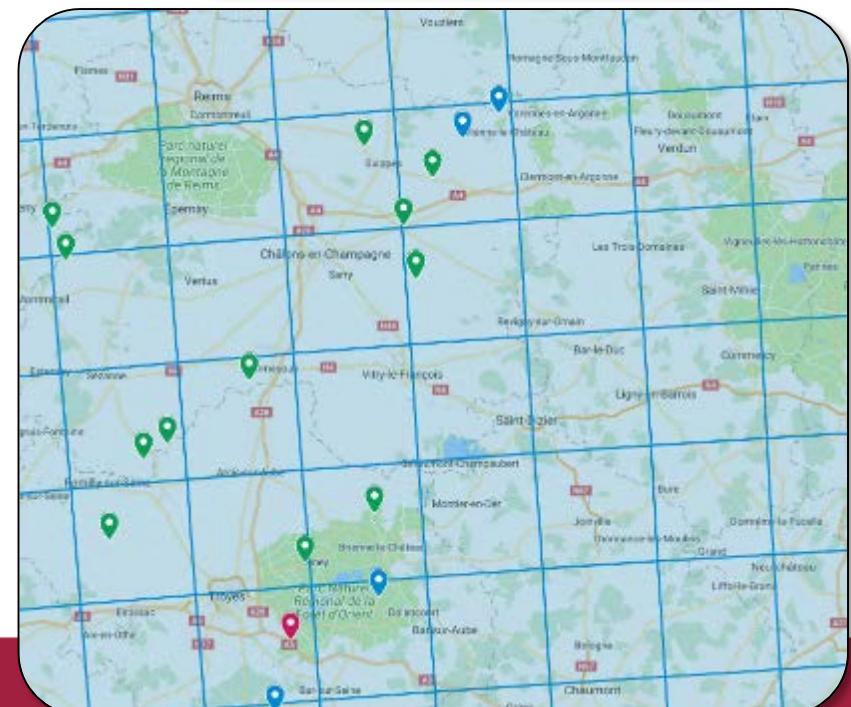

CLIMATE DATA

AUTOMATIC CALCULATION OF MORE THAN 65 ACI

- **Generic indicators:** rainfall, , temperatures, etc.
- **Fodder indicators:** date for grass regrowth, date for 1st grazing , etc.
- **Cereal crops indicators:** end of cycle thermal and hydric stress, etc.
- **Summer crops indicators:** temperatures > 32° C, summer hydric deficit, etc.
- **Rapeseed crops indicators:** drought at sowing, etc.
- **Vineyards and orchards indicators:** date of late frost, Huglin index, etc.
- **Animal indicators:** temperature-humidity index, etc.

The screenshot shows the Agri4Cast Resources Portal interface. At the top, there is a header with the EU flag, the text 'JOINT RESEARCH CENTRE', 'Agri4Cast Resources Portal', and links for 'Data', 'Software', 'Register', and 'Login'. Below the header, there are two main sections: 'Gridded Agro-Heterological Data in Europe' and 'Monthly Cooling and Heating degrees Indexes in Europe'. Each section includes a thumbnail image, a version number, a date, and a brief description of the data.

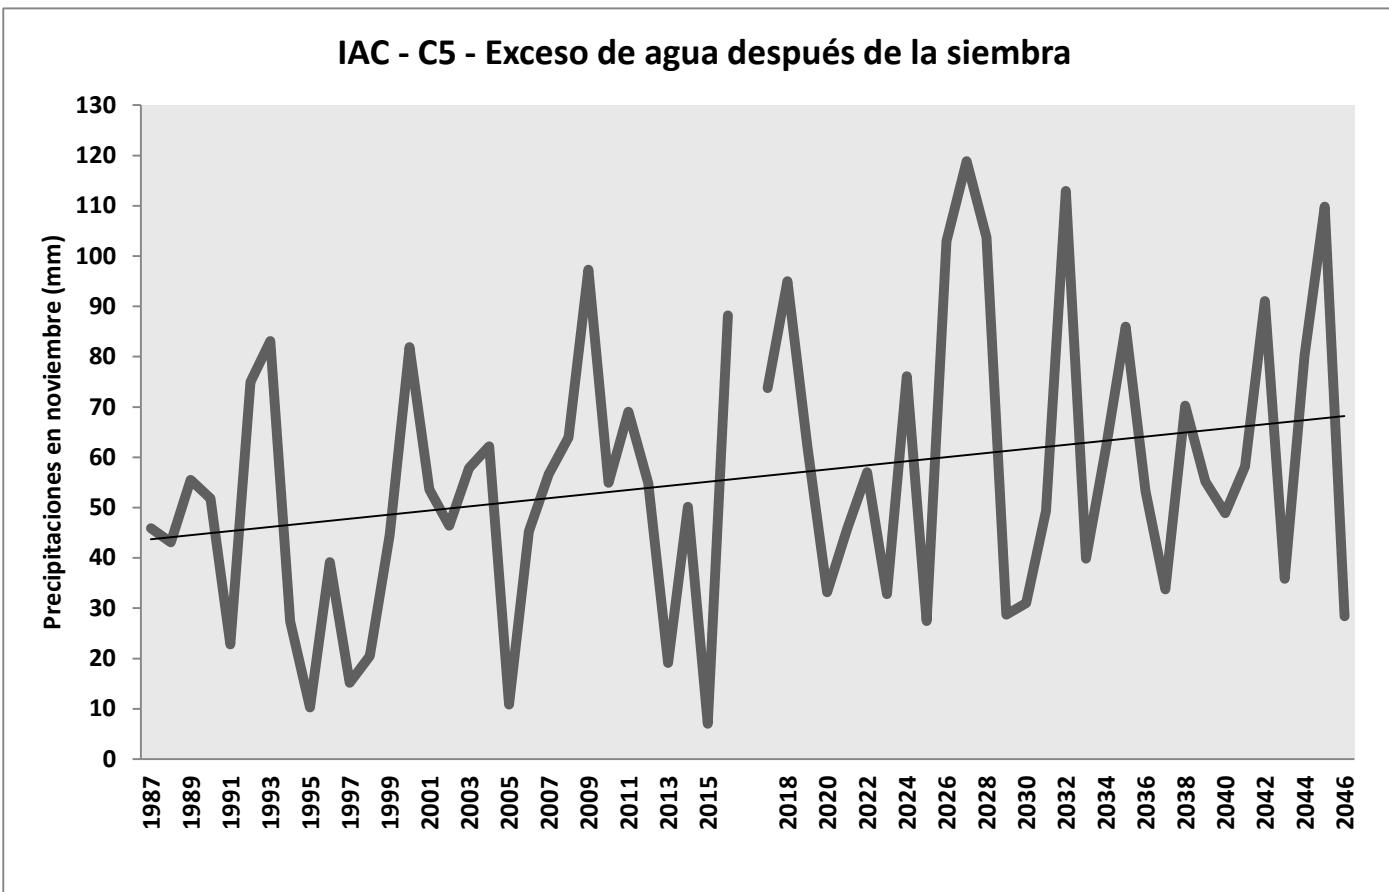

Example. Six-row barley

Agro Climatic Indicators (ACIs)

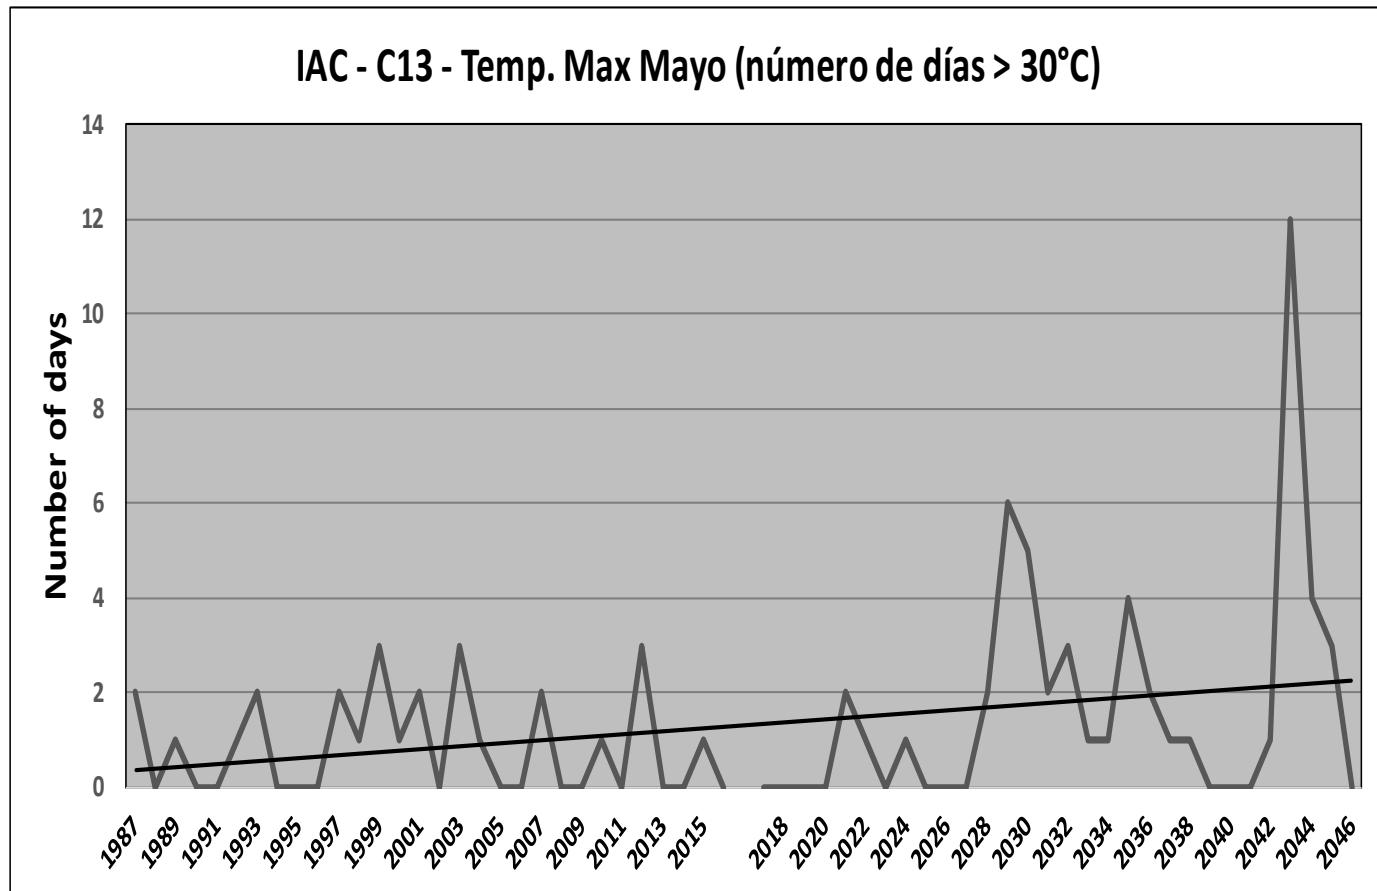

- **Water excess** after sowing: >100mm between November and December
- **Ear formation and ripening** from 15°C to 20°C.
- **Proper sprouting** around 6° C
- **Growing Degree days:** 1.900°C
- **Extreme cold** never below -10°C.
- **Average temperature in December:** around 6° C.
- **Frost during first stages:** $T < -4.5^{\circ}\text{C}$ in late April/early May (critical > 5 days).
- **Low temperatures in April** (minimum $< 4^{\circ}\text{C}$) and **low radiation** ($< 200 \text{ cal/m}^2/\text{day}$) or **water excess** during several consecutive days.
- **Damage due to high temperatures in May:** nb of days with $T > 30^{\circ}\text{C}$ (critical > 20 days)
- **Number of days with no rain in April:** 15 consecutive days with no rain
- **Hydric stress (P-ETp)** between March and June $< -300 \text{ mm}$

Example: yields. Six-row barley

Recommendations for arable crops

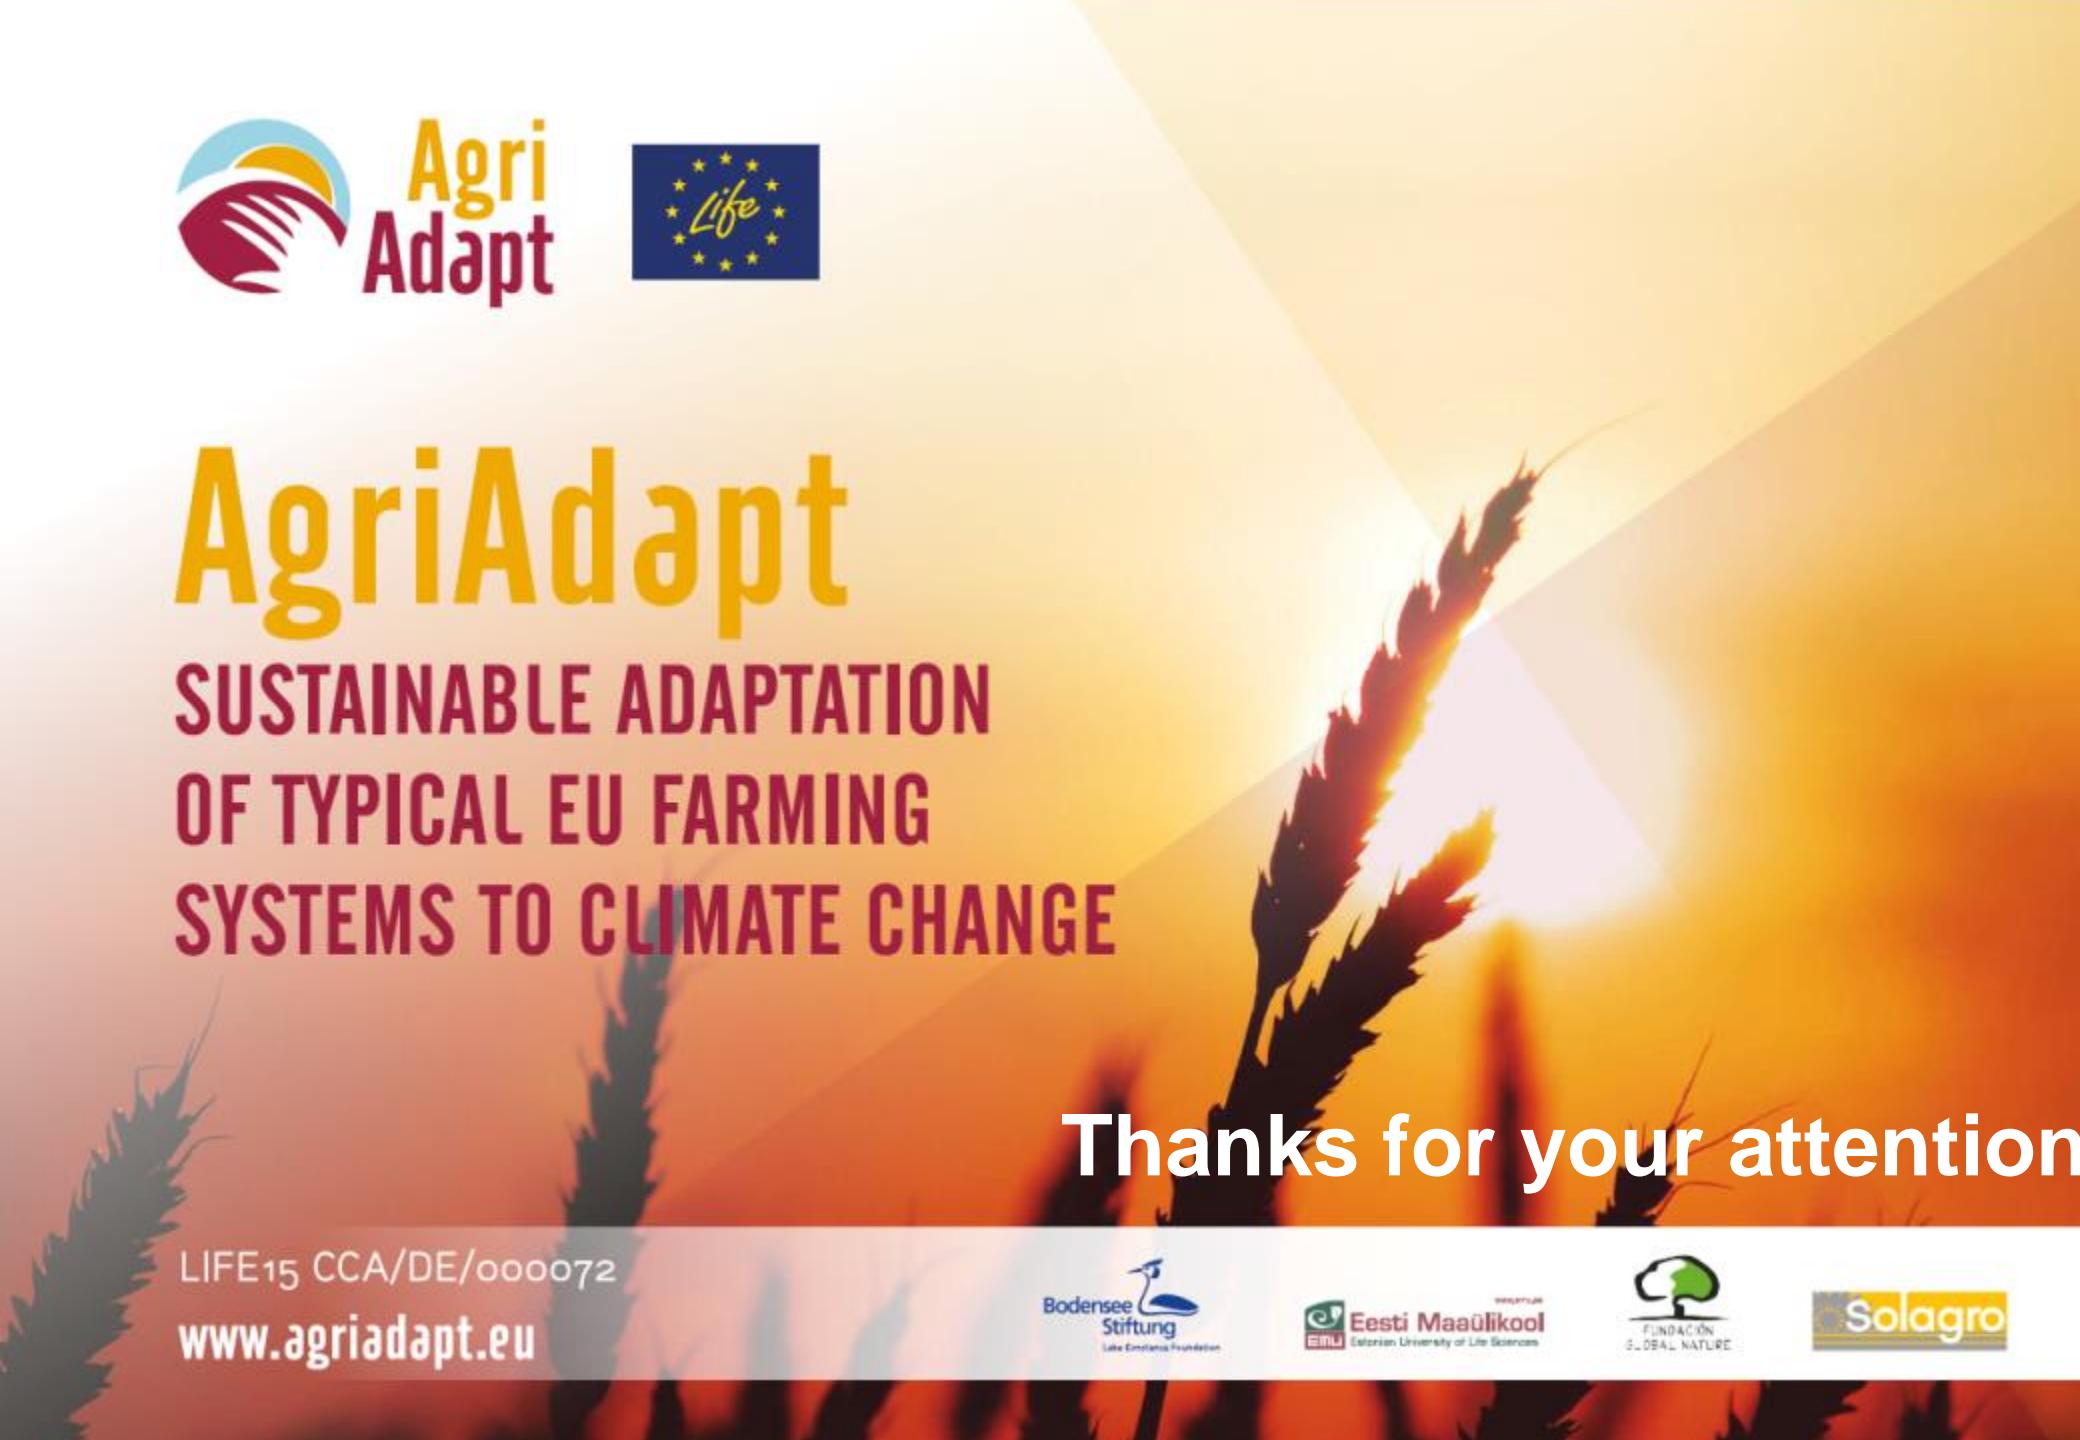

- Create a varietal bouquet (traditional varieties, long cycle varieties...)
- Diversify crops and rotations (more crops in rotation, early crops, spring crops in case of dry autumns, more/less tolerant crops, monitor ACIs)
- Improve soils (winter crops, reduced tillage, organic amendments)
- Deficit irrigation and efficiency
- Hedgerow and flower strips plantations (added value to crops)

AgriAdapt

SUSTAINABLE ADAPTATION OF TYPICAL EU FARMING SYSTEMS TO CLIMATE CHANGE

A large, stylized graphic of wheat ears in shades of orange, yellow, and black dominates the background, set against a warm sunset or sunrise gradient.
